## PREFACE

This report presents the results of a detailed Air Force Occupational Survey of the Supply Services Career Field, AFSCs 61130, 61150, 61170, 61230, 61250, 61270, and 61290. The project was directed by USAF Program Technical Training, Volume 2, dated January 1976. Authority for conducting specialty surveys is contained in AFR 35-2. Computer outputs from which this report was produced are available for use by operating and training officials.

The survey instrument was developed by Captain Thomas E. Ulrich, Inventory Development Specialist. Mr. Guy B. Cole and Captain Frederick B. Bower, Jr., analyzed the survey data and wrote the final report. This report has been reviewed and approved by Major Walter F. Kasper, Chief, Airman Career Ladders Analysis Section, USAF Occupational Measurement Center, Lackland AFB, Texas 78236.

Computer programs for analyzing the occupational data were designed by Dr. Raymond E. Christal, Occupational and Manpower Research Division, Air Force Human Resources Laboratory (AFHRL), and were written by the Project Analysis and Programming Branch, Computational Sciences Division, AFHRL.

Because volume reproduction of this report is not feasible, distribution is made on a loan basis to air staff sections and major commands upon request to the USAF Occupational Measurement Center, attention of the Chief, Occupational Survey Branch (OMY), Lackland AFB, Texas 78236.

This report has been reviewed and is approved.

## SUMMARY OF RESULTS

1. Survey Coverage: The Supply Services job inventory was administered during the period April through July 1977. Survey results are based on responses from 70 percent of the personnel assigned to the Supply Services career ladder (AFSC 611X0), 68 percent of the personnel assigned to the Meatcutter career ladder (AFSC 612X0), and 66 percent of the assigned Supply Services Superintendents (AFSC 61290).

2. Career Ladder Structure: The career field was found to be very heterogeneous in terms of both duties and tasks performed by incumbents. Analysis revealed eleven major groupings which included 86 percent of the survey respondents. The remaining 14 percent of the survey sample consisted of "isolates", or individuals whose duties and responsibilities are so diverse they were not related to an identifiable group.

3. DAFSC Differences: In the Supply Services career ladder (AFSC 611X0), there was a clear difference in job emphasis toward supervisory responsibilities between the 3-skill level and the 5-skill level and again between the 5- and 7-skill level. However, some jobs within the career ladder required 5- and 7-skill level personnel to continue performing technical or even menial tasks. In the Meatcutters' career ladder (AFSC 612X0), tasks performed at both the 5- and 7-skill levels were nearly identical. The greater percent time spent on supervisory and management duties marked the real difference in the 7-skill level jobs. Both ladders combined at the 9-skill level (AFSC 61290). With this group, supervisory and management duties take up 74 percent of the job time.

4. AFR 39-1 Evaluation: The current 611X0 job descriptions did not accurately reflect the jobs within the career ladder. A proposed change to the job description was also evaluated. Although it is an improvement over the current job description, it also appears incomplete. The 61230/50/70 job descriptions were found to reflect an accurate picture of jobs performed by these personnel.

5. STS Evaluation: In general, the 611X0 STS covered the major aspects of the Supply Services career ladder. However, the 5-skill level group did not require a knowledge level in the duties pertaining to mortuary affairs. Survey results indicated that at least eight percent of 61150 personnel were performing one or more tasks directly related to the mortuary affairs functions. The 61230/50/70 STS was very accurate in covering the principle responsibilities of the Meatcutter career ladder.

6. Job Satisfaction: Only 52 percent of the respondents from the Supply Services career ladder (611X0) reported that their job was interesting. This was very low when compared to the 80 percent average for incumbents in other career ladders surveyed in 1976, and may represent a potential problem area. Certain subgroups within the AFS have particularly low job interest (such as linen exchange and commissary stocking). On the other hand, 75 percent of the personnel assigned to the Meatcutter (612X0) career ladder felt that their job was interesting.

OCCUPATIONAL SURVEY REPORT  
SUPPLY SERVICES CAREER FIELD  
(AFSCs 61130, 61150, 61170, 61230, 61250, 61270, 61290)

INTRODUCTION

This is a report of an occupational survey of the Supply Services career field (AFSCs 61130, 61150, 61170, 61230, 61250, 61270, 61290) completed by the Occupational Survey Branch, USAF Occupational Measurement Center, during November 1977. The previous occupational survey of this career field was published during May 1970.

The Supply Services career field is a direct entry career field. Personnel are assigned directly to the career field upon completion of Basic Military Training and obtain the 3-/5-/and 7-skill levels through accomplishment of career development courses. However, at the present time, the 612X0 ladder contains no 3-skill level or first enlistment airmen due to an extended closing of entries into this ladder which was brought about by overmanning and reductions in authorizations.

This report describes: (1) development and administration of the survey instrument; (2) summaries of tasks performed by airmen grouped by skill level, experience level and similarity of tasks performed; (3) comparisons with career field structure documents; and (4) recommended actions for further study.

INVENTORY DEVELOPMENT

The data collection instrument for this occupational survey is USAF Job Inventory AFPT 90-611-212. Thorough research of publications and directives, personal interviews with 15 subject matter specialists at two bases and written reviews from 62 experienced supply services personnel contributed to the development of the survey instrument, which consists of 481 tasks grouped under 19 duty headings and a background section that includes information about the respondents.

During the period March 1977 through July 1977, consolidated base personnel offices in operational units world wide administered the inventory booklets to job incumbents holding

APPROVED FOR PUBLIC RELEASE; DISTRIBUTION UNLIMITED

the DAFSCs identified above. Table 1 reflects the percentage distribution, by major command, of assigned personnel in the career ladders as of 10 October 1977. Also reflected is the distribution, by major command, of incumbents in the final survey sample. The 810 respondents in the final survey sample represent 69 percent of the career field population of 1,170 members.

## CAREER LADDER STRUCTURE

The job structure of the Supply Services career field was examined on the basis of similarities in the tasks performed by incumbents in the field, independent of DAFSC or other background factors. The computer printouts used in this part of the analysis helped identify: (1) tasks which tend to be performed by the same incumbents; (2) the breadth or narrowness of jobs performed in the field; and (3) tasks and background characteristics used in distinguishing among different jobs within the career field. Structure analysis therefore provided an objective indication of the amount of task overlap among the various groups of incumbents included in the survey.

Based on task similarity, the best division of the jobs performed in the 611X0 and 612X0 career ladders is illustrated in Figure 1. These jobs are identified below. The GRP numbers shown with each group is a reference to computer printed information included for use by classification and training officials.

- I. Linen Exchange Personnel (GRP061, N=132)
- II. Supply Services Supervisors (GRP044, N=210)
- III. Mortuary Affairs NCOs (GRP228, N=40)
- IV. Staff Advisors/Evaluators (GRP094, N=20)
- V. OJT Administrators (GRP174, N=6)
- VI. Meatcutters (GRP097, N=40)
- VII. In-Store Commissary Stockers (GRP043, N=87)
- VIII. Commissary Warehousemen (GRP053, N=93)
- IX. Cashiers (GRP042, N=43)
- X. Troop Issue Clerks (GRP201, N=10)
- XI. Clothing Issue Specialists (GRP206, N=12)

Eighty-six percent of the incumbents in the sample were found to perform jobs roughly equivalent to those described in the eleven major groupings listed above. The remaining 14 percent of the sample included members whose jobs were not associated with any of these major groups. These isolates were found to represent commands and AFSCs fairly equally and to share no basic common characteristics.

### Group Descriptions

The Linen Exchange Personnel group (GRP061) is comprised of two primary subgroups, the Linen Exchange NCOICs (GRP162) and the Linen Exchange Specialists (GRP089). Group members perform a large core of common tasks within relatively few duties. The performance of 20 tasks occupies 50 percent of their time. All of these tasks are directly related to the operation of linen exchange activities. The basic differences between these two subgroups are in the time spent per task and the fact that one group is comprised mostly of supervisory personnel while the other group is made up of airmen of a lesser skill level. Task differences are minimal. It should be noted that perceived utilization of talents and training was extremely low for this group. The linen exchange specialists are the least satisfied individuals of all groups within the survey.

The Supply Services Supervisors group (GRP044) is composed of five basic subgroups: Services NCOIC's (GRP103); Commissary Managers (GRP136); Shift Supervisors and Department NCOICs (GRP146); Warehouse NCOICs (GRP138); and Commissary NCOICs (GRP049). Although incumbents within the subgroups work in different jobs with varying degrees of responsibility, they cluster as supply services supervisors based on the fact that 51 percent of their time is spent in supervisory and management duties. An additional ten percent of their time is spent in administrative type functions. Fifty-two tasks are common to 50 percent or more of these supervisors. Tasks performed within all the subgroups ranged from evaluation of sanitation practices to supervising civilian personnel and establishing work priorities. Differences among the subgroups are based on percent time spent in technical task areas and the number of tasks performed. For example, commissary managers perform an average of 212 tasks and spend only seven percent of their time on the actual operation of commissary sales stores, while commissary NCOICs average 45 tasks performed and spend 20 percent of their time in actual store operation. It should be noted that Linen Exchange NCOICs (GRP162) did not cluster with these supervisors because of a significantly higher percent time spent on technical tasks as opposed to supervisory and management tasks.

The Mortuary Affairs group (GRP228) did not cluster with the supervisors even though 87 percent of the group are 7- and 9-skill level personnel and 41 percent of their time is spent in supervisory and management duties. However, 47 percent of their time is spent in duties directly related to the mortuary affairs function. While tasks within these duties are mostly administrative in nature, they are classified as technical rather than managerial. Typical tasks include

maintaining files on deceased persons and evaluating eligibility of individuals for authorized mortuary benefits. This is the most homogeneous group within the career field, with 101 tasks performed by 50 percent or more of the members within the group. Of the 40 members, only 12 indicated they were directly assigned to a mortuary affairs office or section. The remainder indicated their work assignment to be a services office. Task performance shows, however, that mortuary affairs is one of their primary duties.

The Staff Advisors/Evaluators (GRP094) are found in Supply Services Divisions or at higher levels of command. These individuals spend 44 percent of their time inspecting and evaluating and a total of 94 percent in supervisory, management or administrative duties. However, 70 percent have no personnel supervisory responsibilities. They perform practically no tasks of a technical nature. Tasks illustrative of this group's job include evaluating safety or fire prevention practices, evaluating suggestions or complaints, and conducting or attending staff or board meetings.

The OJT Administrators (GRP174) are tasked with the responsibility of conducting and monitoring on-the-job training programs. This group's members perform few technical tasks but spend 89 percent of their time in supervisory, management or administrative duties. Incumbents differ from the Staff Advisors/Evaluator in percent time spent in conducting formal and job proficiency training. OJT administrator tasks performed include planning training requirements, counseling individuals on training progress, and maintaining training records.

The Meatcutters (GRP097) were found to be another fairly homogeneous group. All were found to be working in commissary meat markets. Despite the fact that there are no 3-skill level or first enlistment personnel in this group, only 14 percent of group members time is spent in supervisory and management tasks. Fifty-six percent of their time is spent performing meat processing functions or maintaining equipment, tools and facilities. Regardless of rank or duty position, every incumbent in this group spends some part of his time actually cutting meat. Two principal subgroups make up the meatcutter cluster. As with the linen exchange personnel, basic differences are in the number of tasks performed, time spent per task, and whether or not members were supervisors or technicians.

The In-Store Commissary Stockers group (GRP043) is composed primarily of first enlistment personnel in non-supervisory positions. They spend over half their time on 13 tasks, all of which could be classified as routine or semi-skilled. Examples include: stocking shelves; cleaning display

cases, furniture, or fixtures; and loading or unloading stocks or property. As might be expected, perceived utilization of talents and training is relatively low but is still better than that indicated by the linen exchange group.

The Commissary Warehousemen group (GRP053) is similar in composition to the commissary stockers with the primary exception being that these personnel tend to be in their second enlistment. Again, over 50 percent of their time is spent on only 13 tasks although the tasks performed by this group tend to be of a higher task difficulty level than those tasks performed by the in-store stockers. In addition to loading or unloading stocks and property, this group is also responsible for such tasks as inventorying of warehouse stocks, inspections of incoming stocks or property for identity, quantity or condition, and removing spoiled items from storage.

The Cashiers group (GRP042) is a very heterogeneous group of individuals that have clustered because they receive and disburse cash. Eighty-six percent are assigned to commissary sales store operations and the remainder to base or site exchanges. Personnel in this group spend 40 percent of their time performing tasks within the duty of receiving and dispursing cash and 23 percent in operating commissary sales stores; but there appears to be no clear distinction between supervisors and technicians or other work assignments beyond that of cashier in either tasks performed or percent time spent on tasks. Perceived utilization of talents and training is exceptionally low for this group.

The Troop Issue Clerks (GRP201) are a group of specialists tasked with the responsibility of issuing, transferring, and delivering stocks and property to airmen's dining halls as a function of commissary management. There appears to be no clear differences between supervisors and technicians in terms of tasks performed or percent time spent.

The final group identified within the career field is that of Clothing Issue Specialists (GRP206). All are assigned to the Air Force Military Training Center (Lackland) and issue clothing to basic military trainees. Seventy-eight percent of their time is spent performing tasks involving clothing issue. There are few supervision or management functions performed by the group, with most tasks being of a routine nature such as conducting clothing issue briefings or stocking clothing in bins or on racks. Perceived utilization of talents and training were found to be low for this group.

### Miscellaneous Job Groups

Although the following job types did not cluster as identifiable groups, enough respondents identified themselves as such to make mention of them in this report although they will not be discussed in detail.

<u>JOB TITLE</u>	<u>NUMBER RESPONDENTS</u>
Billeting Clerk or NCOIC	18
Technical Representative, Contract Officer (TRCO)	6
Site Manager/Steward	18

Complete summaries of representative tasks and background information for each group discussed can be found in Appendix A.

This career ladder structure analysis illustrates the variety and diversity of tasks and duties performed within the career field. Although nearly all meatcutters clustered together, with the exception of some supervisors, 611X0 specialists and technicians clustered into many job types. Most of these job types were found to have very low similarity of tasks performed. However, the job types fall into two major divisions, each containing about half of the survey incumbents. These divisions are commissary services functions and base services functions.

## ANALYSIS OF DAFSC GROUPS

As previously stated, jobs within the Supply Services career fields represent a heterogeneous grouping encompassing a variety of duties and tasks. Table 3 depicts the percent of time spent by skill level groups on the various duties listed in the job inventory. While the duty functions remain basically the same for 61250 and 61270 personnel, duty functions among incumbents in the 611X0 career ladder vary widely depending on what area of supply services they are assigned (see Table 2). Analysis of the data indicates that there is often an overlapping of responsibility within a skill level between performing in a supervisory or management capacity and performing technical tasks. For example, an NCOIC in the linen exchange, although a supervisor, will still issue linen in the absence of his subordinates. However, as a rule, those jobs requiring more supervision, management or technical skill are performed by higher skill level personnel.

### Skill Level Groups

As a group, 61130 supply services specialists perform an average of only 33 tasks or seven percent of the survey inventory. These tasks are usually of a simple or repetitious nature such as issuing or exchanging linen, loading or unloading stocks or property, or stocking shelves. Forty percent of the 3-skill level respondents work in linen exchange functions, and 38 percent work in commissary operations. Only seven percent work in administrative or management functions such as supply services squadrons or commissary management. Even though 79 percent of this group falls into two functional areas, there is little homogeneity within this skill level. As shown in Table 4, only 15 tasks are performed by 30 percent or more of the members of this group.

At the 5-skill level, 611X0 personnel are assigned to positions of greater responsibility. The percentage of this group performing tasks in linen exchange functions drops to 18 percent while those working in commissary operations increases to 48 percent. Five-skill level personnel perform an average of 47 tasks and 26 percent are supervisors. Table 5 lists the most common tasks performed by 30 percent or more of the 5-skill level incumbents. Because over half the group is assigned to either commissary operations or commissary management, the majority of the tasks performed fall under the duty of Receiving and Storing Stocks and Property. However, some supervisory tasks do appear to differentiate the 5-skill level jobs from the strictly apprentice 3-skill level positions.

C10 EVALUATE SANITATION PRACTICES	9	24	-13

Seven-skill level personnel are more involved in supervisory and managerial duties (see Table 7). Percent time spent in these areas represents 50 percent of the total job time and 60 percent listed themselves as supervisors of other workers. This group is more evenly distributed through the functional work assignments with 24 percent working in services offices, 23 percent in commissary operations, and 22 percent in commissary management. Only four percent are assigned to a linen exchange function. AFSC 61170 personnel are less diversified in task performance than the 5-skill level group. Fifteen of the inventory tasks are performed by 50 percent or more of the 7-skill level personnel while only two tasks are performed by 50 percent or more of 61150 personnel.

Although there are six 3-skill level authorizations in the meatcutter career ladder, there are no survey respondents at this level. As previously stated, there are also no first enlistment airmen in this career ladder since the field has been closed to new entries for some time.

In comparison to the 61150 skill level group, the 61250 group exhibits a significantly higher degree of specialization. Eighty-four percent of this group indicated they worked in meat departments or processing plants and perform an average of 42 tasks. Table 9 lists 14 common tasks performed by 70 percent or more of this group as compared to no common tasks performed by 70 percent or more of 61150 personnel. Only 19 percent of this group listed themselves as supervisors of personnel although 52 percent hold the grade of E-5 and seven percent hold the grade of E-6.

The 61270 skill level personnel are also a contrast from their 61170 counterparts. Although 58 percent reported being supervisors, the group only averages 39 percent of time spent on supervisory or management duties. The group averages 112 tasks performed, 36 more than the average for 61170 personnel. Like the 61250 group, the 7-skill level personnel are more specialized in tasks performed. Eighteen tasks are performed by 70 percent or more of the group compared to only one task performed by 70 percent or more in the 61170 group (see Table 10). The major difference between the 5- and 7-skill levels of this career ladder appears to be the greater number of supervisory and management tasks in the 7-skill level positions, coupled with a smaller percentage of time spent on the more technical tasks.

Both the 61170 and 61270 skill levels converge to form the 61290 superintendent position. Seventy-four percent of the 9-skill level respondents' time is spent in the supervisory and management functions. An additional 15 percent of their time is spent in administrative and mortuary affairs related

functions. This group averages 72 tasks performed but only 35 tasks are performed by 50 percent or more of the group. This tends to indicate the heterogeneity of the career field even at the 9-skill level. Thirty-six percent of the survey sample indicated they worked in services offices, 24 percent in commissary management, 14 percent in commissary operation and two percent in mortuary affairs. None are assigned to a meat cutting or linen exchange function.

## ANALYSIS OF AFMS GROUPS

An analysis was also made comparing job differences among groups of individuals grouped by time in service. Very similar conclusions to those for DAFSC groups were noted in both career ladders.

### Supply Services Specialists (AFSC 611X0)

Table 14 reflects the time spent on duties by 611X0 personnel grouped by enlistment period. Throughout all enlistment periods, airmen tend to be moved into positions of greater supervisory and management responsibilities as they gain time in service. The longer an individual has in service the fewer technical tasks and duties he or she is likely to perform. This is best illustrated by comparing work assignments and the percent of members performing in them through the enlistment groups. The following is an example:

<u>WORK ASSIGNMENT</u>	<u>PERCENT ASSIGNED BY ENLISTMENT GROUP</u>					
	<u>1-48</u>	<u>49-96</u>	<u>97-144</u>	<u>144-192</u>	<u>193-240</u>	<u>241+</u>
Commissary Operations	55	46	41	21	26	10
Linen Exchange	23	18	17	12	7	0
Commissary Management	3	6	13	20	19	21
Services Office	3	4	6	14	2	28

This trend was also found among DAFSC groups and illustrated in Table 2. In addition, time spent on supervisory and management duties increase with each enlistment as shown in Table 14.

As with the DAFSC groups, AFMS groups show no homogeneity of tasks performed. Even among the later enlistments where incumbents were found to be performing mostly supervisory and management tasks, the types of tasks are varied. The group with the highest number of common tasks is the 241+ AFMS group. Of a possible 481 tasks, only 32 are performed by 50 percent or more. One-hundred and six tasks are being performed by 30 percent or more of this group's incumbents.

In looking at the job performance of first enlistment airmen (1-48 months AFMS), it was found that only 16 of the 481 tasks in the job inventory are performed by 30 percent or more of the incumbents. The average number of tasks performed

Meatcutters (AFSC 612/3/5/70)

Table 16 shows the percent time spent on duties by the various enlistment groups in the meatcutter career ladder. This is a very close parallel to the DAFSC groups shown in Table 3. It is at the fourth enlistment where these incumbents show a noted increase in time spent on supervisory and management duties although time spent on those duties pertaining to the processing of meat and operation of commissaries remains high into the sixth enlistment. There is more homogeneity of task performance in this career ladder with 30 percent of second enlistment personnel performing 45 tasks and 172 tasks performed by 30 percent or more of those with 241 or more months AFMS.

As previously stated there are no first enlistment personnel in this career ladder.

## ANALYSIS OF CONUS/OVERSEAS DIFFERENCES

An analysis of task performance between 5-skill level incumbents stationed within the CONUS and those stationed overseas was made for both the 611X0 and 612X0 career ladders. In general, very little difference was found in either career ladder.

Table 17 lists those tasks which best differentiate between 611X0 CONUS and overseas incumbents. The tasks listed are too varied and the difference figures for percent members performing are too small to conclude that there are any significant differences between these two groups.

Table 18 lists those tasks showing the largest differences in percent members performing for the CONUS and overseas groups in the 612X0 career ladder. Meatcutters overseas appear to be more involved in supervisory and management functions and the overall operation of commissary sales stores (Duty M) than their stateside counterparts.

## ANALYSIS OF TASK DIFFICULTY

From a listing of airmen identified for the 611X0/612X0 job survey, incumbents in the 7- and 9-skill levels from various commands and locations were selected to rate task difficulty. Tasks were rated on a nine-point scale from extremely low to extremely high difficulty, with difficulty defined as the length of time it takes an average incumbent to learn to do the task. Interrater agreement among the 49 raters was .94. Ratings were adjusted (standardized) so that tasks of average difficulty have ratings of 5.00.

Of the 481 tasks in the inventory booklet, 224 were rated above average in difficulty. Only 21 of the 224 tasks were performed by 20 percent or more of the respondents which illustrates the diversity of tasks within this career field. As shown in Table 19, these 21 tasks rated as difficult deal with supervisory and management duties. When looking at all above average difficulty tasks, regardless of percent members performing, it was found that all tasks pertaining to mortuary affairs were rated above average difficulty.

Of the 256 tasks rated as less than average difficulty, 26 were performed by 30 percent or more of 61XXX respondents. These tasks are listed in Table 20. In general, below average tasks were found throughout the duties performed by this career field with the exception of those duties involving mortuary affairs. As shown by the tables, the only tasks performed by large numbers of incumbents are those of a general maintenance nature. This further illustrates that tasks performed by members of this career field are quite diverse even among those of below average difficulty.

## COMPARISON OF AFR 39-1 JOB DESCRIPTIONS TO SURVEY DATA

Survey results were compared to the AFR 39-1 job descriptions for both the 611X0 and 612X0 career ladders. The job descriptions for Supply Services personnel, AFSC 611X0, cover tasks pertaining to the operation of sales store activities, operation of laundry/dry cleaning facilities, planning and scheduling of supply services activities, and the performance of technical supply services functions. The job descriptions for the Meatcutters (AFSCs 61230/50/70) cover tasks relating to the cutting, preparing, packaging, and storing of meat, fish, and poultry; salvaging of bone, fat, and trim; operating and cleaning meatcutting tools and equipment; and the planning and scheduling of meat processing activities.

Overall, the descriptions for the 61230/50/70 Meatcutters generally reflect an accurate picture of the jobs performed within the career ladder. Analysis of the survey data shows substantial percentages of personnel in the ladder performing tasks related to these functions. However, survey data reflects a different picture of duties and responsibilities for the 611X0 personnel than that listed in the AFR 39-1 job descriptions.

The current job descriptions for the 611X0 career ladder include non-pertinent information and omits some important tasks. The 61130/50 skill level job description makes no specific reference to commissary sales store operations although 38 percent of DAFSC 61130 and 48 percent of DAFSC 61150 survey respondents indicated this function to be their primary duty. Further, there is no mention of warehousing tasks even though 149 members of the survey sample clustered as either warehouseman or warehouse supervisors. One paragraph is devoted solely to the operation of laundry and dry cleaning facilities. However, investigation during inventory development revealed only one laundry/dry cleaning facility remaining in the Air Force that is managed by 611X0 personnel. On the other hand, there is no reference to operation of linen exchanges, a functional area to which 16 percent of the survey respondents reported being assigned. In addition, no mention is made of the functions of mortuary affairs, troop issue, or clothing issue, all major duties performed by 5-skill level personnel.

On 26 October 1977, Headquarters ATC/TTSS forwarded proposed changes to the AFR 39-1 job descriptions for this career field for coordination. Briefly, the proposal involved the following changes:

1. The career field title would be changed from "Supply Services" to "Services;"

2. Billeting responsibilities would be added to AFSCs 611X0 and 61290, while removing these duties from the 702X0B AFSC. Assigned AFSC 702X0B personnel would be directly converted to AFSCs 611X0 or 61290 upon implementation of the changes;

3. The title for the 611X0 career ladder would be changed from "Supply Services" to "Services";

4. The specialty descriptions for AFSCs 61290 and 611X0 would be updated to more accurately reflect current duties, responsibilities and terminology; and

5. The 612X0 career ladder would be recoded to aid Air Staff activities in planning and programming personnel requirements. This would involve changing AFSC 61290 to 61199 and DAFSCs 612/10/30/50/70 to 611/11/31/51/71.

These proposed AFR 39-1 changes were compared to the survey data for evaluation. On the whole, most of the changes appear realistic. The addition of the billeting function to this career field seems appropriate in that 18 respondents to the survey indicated that they were already working in the billeting area. It should be pointed out, however, that the proposed changes still leave some problem areas, particularly with the AFSC 61130/50 specialty description. While the proposed change makes this specialty description more comprehensive than the current description, it still does not contain duties and responsibilities pertaining to linen exchange, warehousing, mortuary affairs, troop issue, or clothing issue. Thus, it is recommended that these areas be included in the next revision to the AFR 39-1 specialty description.

COMPARISON OF 611X0 SPECIALTY TRAINING STANDARD (STS)  
WITH SURVEY RESULTS

A review of STS 611X0, dated March 1977, was made by comparing STS items to survey data for the 611X0 respondents. Paragraphs one through three were not evaluated since they contain general information which is applicable across most career ladders.

All STS paragraphs evaluated were consistent with survey data. However, because of the diversification and variety of jobs within the career ladder, the percent of members performing any single task is quite low. This precluded evaluating the significance of a task based on the percent of members performing. The STS does not cover clothing issue. While this function is performed at only one location, mention of it should be made as it is a specific duty of the career ladder. In addition, 61150 personnel are currently not required to maintain task performance, task knowledge, or subject knowledge levels of the mortuary affairs duty area. Survey data indicated at least eight percent of 5-skill level respondents were performing at least some tasks relating to mortuary affairs. Inclusion of at least a subject knowledge experience level should be considered during the next scheduled review of the 611X0 STS.

COMPARISON OF 61230/50/70 SPECIALTY TRAINING STANDARD (STS)  
WITH SURVEY RESULTS

A comprehensive review of STS 61230/50/70, dated 26 November 1975, was made comparing STS items to survey data. Paragraphs one through three were not evaluated since they contain general information which is applicable across most career ladders.

The paragraphs evaluated were all well supported by the survey data. The meatcutter career ladder is much more specialized in terms of tasks performed than the supply services career ladder. Incumbents were found to be performing those tasks listed in the STS and sufficient numbers to establish the significance of the task within the career ladder. An observation should be made, however, that this STS does not include those supervisory and management tasks at the 7-skill level involving overall commissary management and operation as does the 61170 STS. Survey data shows only 15 percent of 61270 personnel performing commissary management tasks that were not associated with the meat department operation. Therefore, most 61270s are not exposed to many job areas they would manage upon assuming the 9-skill level. Based upon a comparison of DAFSC 61290 duties with both the 61170 and 61270 STS management areas, it appears that the 61170 technician is better prepared to assume 9-skill level functions than his 61270 counterpart.

## COMPARISON OF CURRENT SURVEY TO PREVIOUS SURVEY

The results of this survey were compared to those of Occupational Survey Report 90-611-808, dated 1 May 1970. The comparison resulted in the following conclusions:

1. The career field structure has changed significantly since the last survey. The authorized strength of the career field has decreased, and clothing sales and redistribution and marketing are no longer functions of this career specialty. No meatcutters were found assigned to central meatcutting plants in the current survey, but the number of personnel assigned to the linen exchange function had tripled since the last study. Troop issue and clothing issue groups were also not identified in the 1970 report.

2. Tasks performed and percent time spent vary little between reports. The career field, in particular the 611X0 career ladder, has remained heterogeneous.

3. Task data of incumbents grouped by skill level and TAFMS were found to have changed little since the 1970 study. No major differences were noted between the two reports.

## SUMMARY OF BACKGROUND INFORMATION

### Assignment to Career Ladder

Fifty-one percent of the 611X0 incumbents were assigned to the career ladder by direct duty assignment (DDA) from basic training without a bypass test. Eighteen percent were retrained from another career ladder, while an additional six percent were converted from another AF specialty by classification board action. Incumbents of the 61230/50/70 ladder were primarily assigned to the ladder by directed duty assignments, 37 percent with bypass test and 27 percent without bypass test. An additional 12 percent were either retrained from another specialty or reenlisted after prior service. Other personnel in both ladders were assigned by various other methods, none of which accounted for over five percent of the sample.

### Relative Job Satisfaction

Percentages responding to the various points of job interest and perceived utilization of talents and training for each of the two career ladders are shown in Tables 21 and 22.

Only 51 percent of the 611X0 career ladder respondents indicated that their job was interesting. First and second term airmen contributed heavily to this extremely low job interest, with only 35 percent of each of these two groups finding their jobs interesting. Incumbents in the third and subsequent enlistment groups showed much higher satisfaction, with 70 percent or more in each group finding their jobs interesting. However, even these groups were below the 80 percent average found for incumbents in other career ladders which were studied in 1976.

In the meatcutter ladder (AFSC 61230/50/70), 75 percent of those responding felt that their job was at least fairly interesting. As in the supply services ladder (AFSC 611X0), personnel with the least amount of service, in this case those in their second enlistment, found their jobs less interesting than personnel with longer periods of service.

The responses concerning the extent to which their jobs utilized their talents and training were closely related to job interest. Fifty-seven percent of the 611X0 incumbents felt that their talents were being utilized fairly well or better, while 61 percent reported similar feelings regarding use of their training. As for meatcutters, 79 percent

NOTE: THERE WERE NO DAFSC 61230 IN THE SURVEY DATA.

reported that their talents were used fairly well or better while 81 percent felt that their training was effectively utilized. These responses, especially those expressed by the 611X0 personnel, are below the 85 percent averages reported for personnel in other career ladders surveyed in 1976.

#### Reenlistment Intentions

The expressed intentions toward reenlistment among survey respondents in both career ladders are shown in Table 23. A relatively high percentage of the personnel in the 611X0 career ladder indicated that they would or probably would reenlist. Only 59 percent of the 612X0 personnel in their second term, however, indicated that they planned to reenlist. Career personnel reflected in the 612X0 group included both meatcutters and supply services superintendents at the 9-skill level. Even so, only 59 percent of this group reported an intent to reenlist.

Actual reenlistment rates for FY 76 are given in Table 24. First-term rates for 611X0 personnel were slightly lower than survey predictions while second term and career rates were somewhat higher. Second term and career rates for 612X0 personnel were much higher than the intentions expressed by the survey respondents.

## DISCUSSION

1. The Supply Services career field consists of a group of jobs where the principal commonality appears to be that they are all support services that do not fall within the responsibilities of any other career ladder. Even though several duties have been deleted while others have been added since the career field was last surveyed, it has continued to be extremely heterogeneous. Commonality of tasks performed between job types is nearly non-existent at the technical level and remains low even at the supervisory and management level.
2. Review of the change to the AFR 39-1 job description proposed for April 1978 indicated the 611X0 career ladder will have an increase in responsibility and personnel positions with addition of the billeting function. Since this will add to the already diverse tasks for which this career ladder is responsible, some consideration should be given to other possible classification structures. One logical alternative would be to move all commissary personnel to the 612X0 career field (perhaps retaining the distinctness of meat cutters with a shredout). Such a move would have the advantage of having a unique AFSC for all commissary personnel. This would clarify career utilization patterns and simplify career development (CDCs and SKTs).
3. The 61230/50/70 career ladder is currently without any first enlistment airmen and possesses only two E-7 authorizations. Serious consideration must be given as to whether the meatcutter specialty should remain a viable career ladder. If the specialty does remain, first enlistment personnel must be entered into the ladder in order to preclude a significant lack of middle grade experience in later years.
4. A more comprehensive and detailed AFR 39-1 job description for AFS 611X0 personnel is needed in order to insure that these airmen will be utilized properly in the field. This would also allow personnel to be fully aware of their job responsibilities as they pertain to their job.
5. A subject knowledge proficiency level of the functions of mortuary affairs should be included for 5-skill level personnel in the 611X0 STS. In addition, more management training should be considered for inclusion at the 7-skill level in the 61230/50/70 STS.
6. The low job satisfaction level among Supply Services personnel appears to center around the amount of time spent performing low difficulty, menial tasks (such as linen exchange).

Consideration should be given to finding ways to make the jobs within the career field less menial and more meaningful, especially at the lower grade levels.
